SUMMARY

Computer Science graduate (B.Tech, 2026) building LLM applications in Python. I built and deployed an agentic sourcing assistant with LangGraph, Gemini and pgvector, and measured it on a 40-request evaluation set: precision@5 went from 0.54 with plain vector search to 0.97 with the full pipeline. I have also built RAG and ReAct agents with LangChain, Pinecone and LangSmith.

SKILLS

Generative AI: LLMs, Agentic AI, RAG, LangGraph, LangChain, Prompt Engineering, Structured Outputs, Embeddings, LLM Evaluation, Human-in-the-loop
LLM APIs & Tools: Gemini API, OpenAI API, TypeSafe Jev, LangSmith, Tavily API
Vector Search: pgvector, Pinecone, Hybrid Search (SQL + vector)
Languages: Python, SQL, C++, C, JavaScript
Backend & Data: FastAPI, Pydantic, SQLAlchemy, PostgreSQL, Django, Flask, REST APIs, Pandas, NumPy, OpenCV
Tools: Docker, GitHub Actions, pytest, Linux, Git, AWS, Render, Firebase

PROFESSIONAL EXPERIENCE

Embedded Systems Intern, Genesys, Palakkad 03/2024 – 04/2024

- Built and integrated embedded monitoring for medical devices using Arduino and sensors, sending readings to Firebase in real time.
- Developed a web platform for device monitoring that cut manual monitoring effort by 40%.

Developer and Logistician, 3rdEra (Clothing Store) 06/2023 – 08/2023

- Made 15+ UI/UX improvements to the company website in Framer to simplify navigation.
- Ran the Shopify backend, logistics and customer support; sales grew 30% over this period.

PROJECTS

Supplier Finder: Agentic AI Procurement Assistant | GitHub | Live Demo
Tech: Python, LangGraph, Gemini API, TypeSafe Jev, pgvector, FastAPI, PostgreSQL, Docker

- Built an agentic sourcing assistant for a furniture manufacturer. A buyer types a request in plain English; a 7-step LangGraph workflow parses it, asks follow-up questions, searches 500 vendors and returns a ranked shortlist with reasons.
- Used Gemini structured output (JSON schema from Pydantic) to extract item, quantity, unit, location and deadline, with 100% field accuracy on 40 test requests and a rule-based fallback when the API fails or hits its quota.
- Implemented hybrid retrieval: SQL filters on category and delivery region, then pgvector cosine search over 1,536-dimension Gemini embeddings.
- Kept hard rules (minimum order, lead time) in code and used TypeSafe Jev probability scores for spec matching, with thresholds tuned on the evaluation set to reach 98% precision on auto-shortlisted vendors.
- Built an evaluation harness comparing five pipeline versions: precision@5 rose from 0.54 to 0.97, every no-match request correctly returned no vendors, and 8 of 8 vague requests got clarifying questions with none asked unnecessarily.
- Added human-in-the-loop clarification with LangGraph interrupt() and a Postgres checkpointer; deployed with Docker on Render and Neon.

Agentic AI Systems with LangChain and LangGraph
Tech: Python, LangChain, LangGraph, OpenAI API, Pinecone, Tavily API, LangSmith

- Built a documentation Q&A chatbot on a LangChain RAG pipeline: chunked technical docs, embedded them into a Pinecone index and answered from the retrieved context.
- Built a multi-step LangGraph research agent using the ReAct pattern, with Tavily for live web search and LangSmith for tracing and debugging runs.

EduSphere: Educational Video Platform | GitHub | Live Demo
Tech: Flutter, Gemini API, YouTube Data API, Firebase Authentication

- Built a Flutter web app for distraction-free educational videos, with an AI study assistant chatbot powered by the Gemini API and Firebase sign-in.

EDUCATION

B.Tech in Computer Science, Institute of Engineering and Technology, Udaipur 2022 – 2026
Class 12 (CBSE), The Shanti Niketan School, Jodhpur: 76.2% 2021
Class 10 (CBSE), Central Academy School, Jodhpur: 85% 2019
