SUMMARY

Computer Science graduate (B.Tech, 2026) who builds backend services in Python. My latest project is an async FastAPI and PostgreSQL service with 74 automated tests, CI on GitHub Actions and a Docker deployment on Render. I'm comfortable with REST APIs, SQL, Linux and Git, and have also used Django, Flask and Firebase.

SKILLS

Languages: Python, SQL, C++, C, JavaScript
Backend: FastAPI, REST APIs, Django, Flask, Pydantic, SQLAlchemy, asyncio, Alembic
Databases: PostgreSQL, pgvector, Firebase
Testing & CI: pytest, Ruff, GitHub Actions, Jenkins
DevOps & Cloud: Docker, Docker Compose, Linux, Bash, Git, GitHub, AWS, Render, Vercel
AI: LangGraph, LangChain, RAG, Gemini API, OpenAI API, vector search

PROFESSIONAL EXPERIENCE

Embedded Systems Intern, Genesys, Palakkad 03/2024 – 04/2024

- Built and integrated embedded monitoring for medical devices using Arduino and sensors, sending readings to Firebase in real time.
- Developed a web platform for device monitoring that cut manual monitoring effort by 40%.

Developer and Logistician, 3rdEra (Clothing Store) 06/2023 – 08/2023

- Made 15+ UI/UX improvements to the company website in Framer to simplify navigation.
- Ran the Shopify backend, logistics and customer support; sales grew 30% over this period.

PROJECTS

Supplier Finder: AI Procurement Sourcing Agent | GitHub | Live Demo

Tech: Python, FastAPI, PostgreSQL, pgvector, SQLAlchemy, LangGraph, Docker, GitHub Actions

- Built an async FastAPI service that turns a plain-English purchase request (e.g. "200 sheets of 18 mm plywood to Udaipur in 20 days") into a ranked list of suppliers with contact details, drawn from a 500-vendor catalogue.
- Designed the PostgreSQL schema with SQLAlchemy 2.0 and Alembic migrations. A single query applies SQL filters on category and delivery region (GIN indexes) and then ranks by pgvector HNSW similarity.
- Added plain code checks for minimum order and lead time. On a 40-request evaluation set, SQL filters plus these checks raised precision@5 from 0.54 to 0.85; the full pipeline reached 0.97.
- Modelled each request as a LangGraph workflow that pauses to ask the buyer for missing details. State is checkpointed in Postgres and row locks stop duplicate answers, so a paused request resumes correctly after a restart.
- Wrote 74 pytest tests (unit, workflow, and API tests against a real Postgres) run by GitHub Actions with Ruff on every push; shipped with Docker Compose locally and on Render with a Neon database.

EduSphere: Educational Video Platform | GitHub | Live Demo

Tech: Flutter, Firebase Authentication, YouTube Data API, Gemini API, Vercel

- Built a Flutter web app that shows only educational videos, fetched through the YouTube Data API, with Firebase Authentication for sign-in.
- Added an AI study assistant chatbot using the Gemini API and deployed the app on Vercel.

Agentic AI Systems with LangChain and LangGraph

Tech: Python, LangChain, LangGraph, OpenAI API, Pinecone, Tavily API, LangSmith

- Built a documentation Q&A chatbot on a RAG pipeline (chunking, embeddings, Pinecone index) and a LangGraph ReAct research agent that searches the web through Tavily, traced in LangSmith.

Android Custom ROM Development

Tech: AOSP, Linux, Soong/Make, Git, Jenkins

- Built a custom Android ROM from AOSP source and set up a Jenkins CI/CD pipeline for the builds, cutting manual build time by 60%.

EDUCATION

B.Tech in Computer Science, Institute of Engineering and Technology, Udaipur 2022 – 2026
Class 12 (CBSE), The Shanti Niketan School, Jodhpur: 76.2% 2021
Class 10 (CBSE), Central Academy School, Jodhpur: 85% 2019
